

We know that it may not be easy to get expert medical care for your loved one with Down syndrome. So, we are bringing the best health information directly to you and primary care providers.

What is DSC2U?

- An online resource to bring the best of health and wellness information about Down syndrome to family members and primary care physicians around the globe
- We believe that location and personal finances should never prevent someone from accessing the best and most timely medical information for a loved one with Down syndrome

How does DSC2U work?

- DSC2U is accessed online, from comforts of your own home
- You input current symptoms & medical information about your loved one with Down syndrome
- You instantly receive two personalized documents: (1) suggestions and medical information that you, the caregiver, can use, and (2) a companion list of recommendations to share with the primary care provider
- Documents are generated by a computer program designed by national Down syndrome experts
- Access at dsc2u.org

Dr. Brian Skotko, Emma Campbell Endowed Chair on Down Syndrome, Massachusetts General Hospital
